(57)Abstract:

PROBLEM TO BE SOLVED: To resolve the problem that a conventional method for selling digital data troubles a user because the user has to designate a settlement method like a credit number each time when ordering digital data.

SOLUTION: A network discriminates a user terminal by the originating number of a call by which the user terminal accesses a distribution center terminal to access the delivery center terminal, and the distribution center terminal transmits digital data to the user terminal in accordance with an order, and the distribution center terminal transmits delivery completion result information reporting the delivery completion of digital data to the network when receiving reception completion result information reporting the reception completion, and the network disconnects access to the delivery center terminal when receiving delivery completion result information and transmits order completion information, which indicates a demand for the communication charge including the price of digital data, to a communication enterpriser management terminal.
